

Joseph D. Tario
Project Manager
New York State Energy Research and Development Authority

Joseph Tario works in the New York State Energy Research and Development Authority (NYSERDA) in their Transportation Research Department where he primarily manages projects focused on advanced transportation infrastructure and intelligent transportation systems. Prior to joining NYSERDA, Mr. Tario was responsible for the operations and management of four engineering/construction testing facilities located in Albany, Ithaca, Buffalo, and Middleport, New York. Staffing included professional engineers, registered geologists, hydrogeologists, analytical chemists, environmental scientists and field technicians, drillers, and drill helpers. Major projects included the four-year expansion of the Albany International Airport and the geotechnical/seismic analysis for the PG&E power plant constructed in Athens, New York.

He holds an M.E. in environmental engineering, a B.S. in civil engineering, and is a licensed professional engineer in the state of New York.
