## **Sandia National Laboratories – Albuquerque 2007 Illness and Injury Surveillance Report**

### **At A Glance**

Sandia National Laboratories – Albuquerque (SNL) reported 252 absences among 2,365 women, an absence rate of 11 per 100 women (252/2,365). Among the 5,027 men, 305 absences resulted in an absence rate of 6 per 100 men (305/5,027). The overall absence rates have not shown a clear trend for either men or women over the past 5 years.

The highest absence rates were noted in the Service and Security and Fire groups for women (22 per 100 women) and in the Service group for men (13 per 100 men). Over the past 5 years, the highest annual rates among both men and women have generally been in the Service group and Crafts.

Women lost 5,589 calendar days due to illness and injury. Respiratory conditions (21 percent), musculoskeletal conditions (18 percent), genitourinary disorders (12 percent), and injuries (9 percent) accounted for 60 percent of all reported diagnoses among women.

Men lost 6,141 calendar days due to illness and injury, 67 percent of which were due to musculoskeletal conditions (19 percent), injuries (18 percent), respiratory conditions (18 percent), and digestive disorders (12 percent).

Disorders of the musculoskeletal and respiratory systems and injuries have consistently been the most frequently reported diagnoses across the DOE sites participating in the Illness and Injury Surveillance Program (IISP) since 1995.

Of 7 possible occupational sentinel health events, 5 diagnoses were carpal tunnel syndrome. Three of these were reported by workers in the Professional category; 2 were reported by workers in the Service and Administrative Support occupational groups.

The rate of OSHA-recordable health events was 2 events per 100 workers for women and 1 event per 100 workers for men. SNL OSHA-recordable event rates are similar to the rates seen among the other DOE sites participating in the IISP from 1995 to 2004. The OSHA-recordable rates were highest among female Security and Fire workers and male Service workers.

Since 2005, the number of OSHA-recordable events reported has declined 50 percent for men and 43 percent for women. The total number of lost or restricted work days has also declined to a similar extent.

The number of OSHA-recordable diagnoses decreased for both men and women, mainly due to a reduction in musculoskeletal disorders.

### Sentinel Health Events for Occupations (SHEOs)

An occupational sentinel health event (SHEO) is a disease, disability, or death that is likely to be occupationally related. Although sentinel health events may indicate an occupational exposure, many may result from nonoccupational exposures. Sentinel health events are therefore assessed in two categories:

*Definite Sentinel Health Events:* Diseases that are unlikely to occur in the absence of an occupational exposure (e.g., asbestosis).

*Possible Sentinel Health Events:* Diseases that may be occupational but can also occur in the absence of an occupational exposure (e.g., lung cancer or carpal tunnel syndrome).

**Figure 16. Characteristics of SHEOs by Gender**

	Total Number of SHEO Diagnoses		Total Number of Days Absent	
	Men	Women	Men	Women
