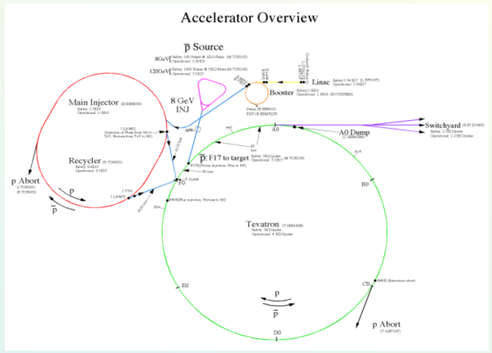
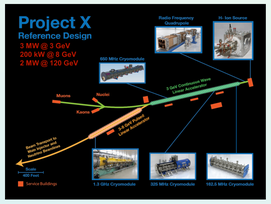
ComPASS SciDAC-3

CONTEXT

High-intensity accelerators *enable exploration of*

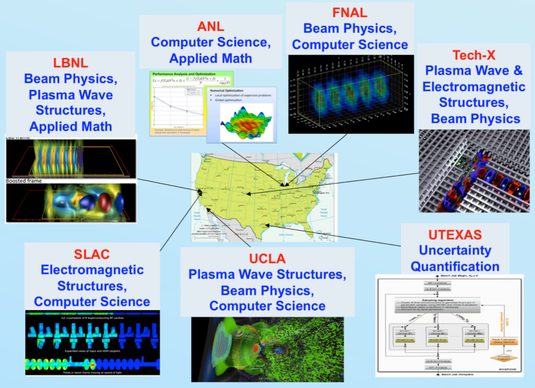




- neutrino interactions, to understand the origins of the universe, matter-antimatter asymmetry, force unification.
- rare processes, to probe energies at the unification scale

Modeling is essential for learning how to control instabilities to minimize beam losses and design, commission and operate these machines

ComPASS *under* ***SciDAC3*** *supports* ***Project-X*** *and the* ***FNAL Proton Improvement Plan***



METHODS & TOOLS

ComPASS SciDAC-3 *is* ***advancing state-of-the-art modeling of Intensity Frontier accelerators****, using (developing if unavailable)****:***

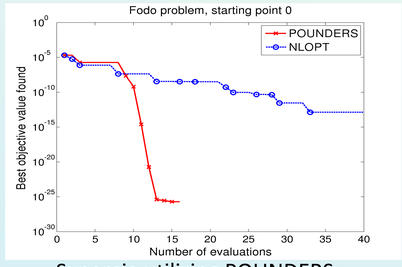
- the most advanced algorithms & performance optimization tools
- cutting-edge non-linear parameter optimization and uncertainty quantification (UQ) methods.

Developing a ***comprehensive set*** *of* ***codes*** *with* ***state-of-the-art electrostatic (ES) & electromagnetic (EM) field solvers:***

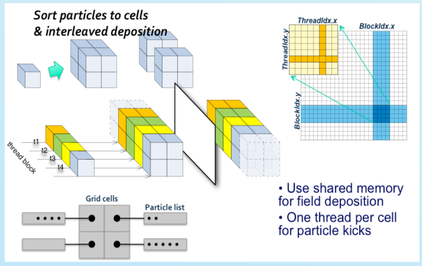
- ES-multigrid (**Synergia, Warp, FASTMath**), ES-AMR multigrid (**Warp, FASTMath**)
- EM-finite element (**ACE3P-FASTMath**),
- EM-extended stencil finite-difference (**Osiris, Vorpal, Warp**),
- EM-AMR finite-difference (**Warp, FASTMath**),
- Darwin-finite-difference (**QuickPIC**).

Working ***with SciDAC institutes:***

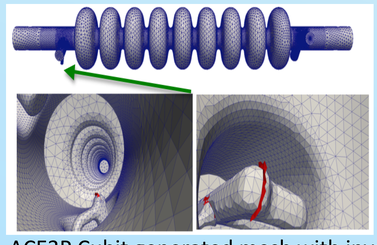
- **FASTMath:** field solvers (SuperLU, Chombo),
- **QUEST:** uncertainty quantification (QUESO),
- **SUPER:** performance analysis & optimization, non-linear parameter optimization.



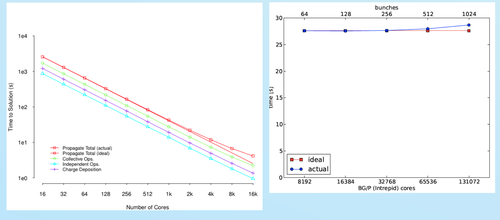
Synergia utilizing POUNDERS



Synergia on GPU based machines



ACE3P Cubit generated mesh with invalid elements (red), for a superconducting cavity



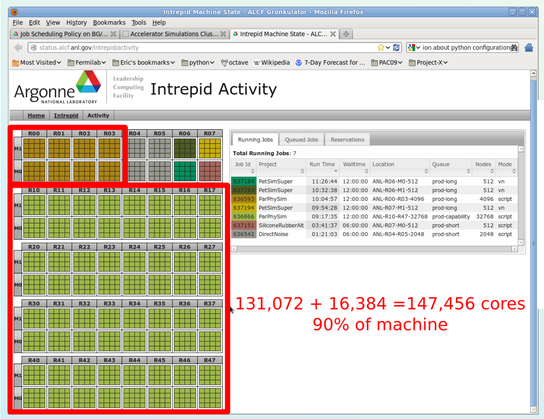
Synergia strong and weak scaling

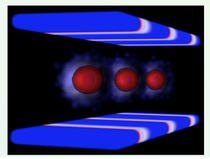
APPLICATIONS

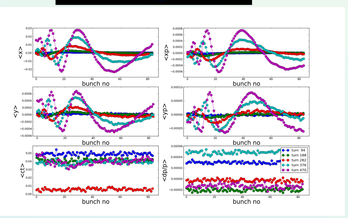
ComPASS tools *provide* ***unique capabilities*** *that are be used for****:***

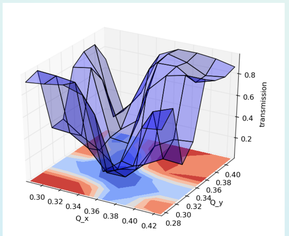
- understanding and mitigating beam losses for existing accelerators,
- optimizing new accelerator designs

The ***ComPASS collaboration*** *has* ***extencive experience*** *in the modeling of* ***high-intensity proton drivers.*** *Under* ***SciDAC3*** *focus on* ***FNAL Proton Improvement Plan and Project-X accelerators.***

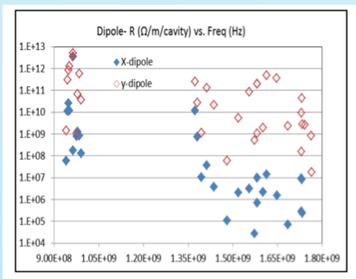


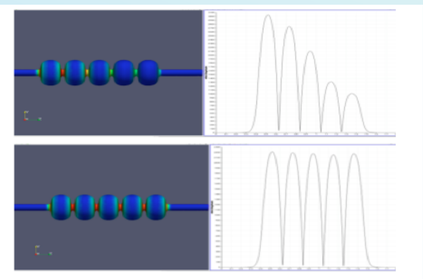




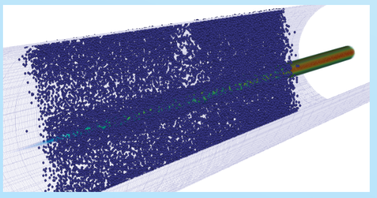


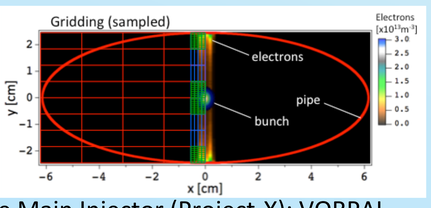
Synergia calculations of multi-bunch effects at the FNAL Booster and tune optimization at the Main Injector (for Project-X)





ACE3P studies of Project-X linac performance including cavity imperfections within mechanical tolerances.





Modeling of electron cloud effects at the Main Injector (Project-X): VORPAL (left), Warp-Posinst (right)
