**Operating Experience/Lessons Learned**

---

**Activity**

Describe the features and benefits of the Department of Energy (DOE) and Oak Ridge Office (ORO) Operating Experience and Lessons Learned Program

At the completion of this activity, fill out the Self-Certification Form certifying that you have read this activity sheet.

**Note:** When regulations, DOE directives, or other industry standards are referenced in this ISMS activity, please use the most recent version. In addition, please note that DOE Guides provide preferred, non-mandatory, supplemental information about acceptable methods for implementing requirements, including lessons learned, suggested practices, instructions, and suggested performance measures. Guides do not impose requirements but may quote requirements if the sources are adequately cited. Alternate methods may be used if it can be demonstrated that they provide an equivalent or better level of performance.

**What's In It For Me**

The ORO Lessons Learned Program objective is to share information from the workplace that may be useful to others. The program manages the generation of lessons learned within the ORO workplace and distribution of lessons learned generated outside ORO to satisfy the DOE requirements for feedback as they pertain to lessons learned. Lessons learned are shared as widely as possible to promote and sustain positive practices and to avoid negative recurrence.

The completion of this activity will help you gain an understanding of how the

---

ORO Lessons Learned program is implemented.

---

**Lessons Learned Program**

In order to prevent adverse operating incidents, DOE managers and employees are expected to share and use good practices and lessons learned from operating experience. Lessons learned are generated from personal experiences, field activities, occurrence reports, assessments, audits, appraisals, operational readiness reviews, and accident investigation reports. The originator of a lessons learned is any individual who identifies and documents a proposed lessons learned. Lessons learned are a part of the requirement for feedback and continuous improvement.

The ORO Operating Experience and Lessons Learned (OE/LL) Program Coordinator, appointed by the Assistant Manager for Environment, Safety, and Health (AMESH), works in conjunction with Operating Experience and Lessons Learned Coordinators from various ORO organizations. As appropriate, selected lessons learned and/or operating experience information are sent to ORO OE/LL coordinator or directly to Assistant Managers or Division Directors. ORO contractors administer lessons learned programs to their employees and ensure their subcontractors have lesson learned programs. The requirement for sharing of lessons learned is flowed to ORO contractors through the DOE Acquisition Regulation clause on Integrated Safety Management and the Contractor Requirements Document for DOE O 210.2A.
