

# DOE EERE Program Office Perspective: Lessons Learned from Managing SBIR/STTR Projects and Portfolios.

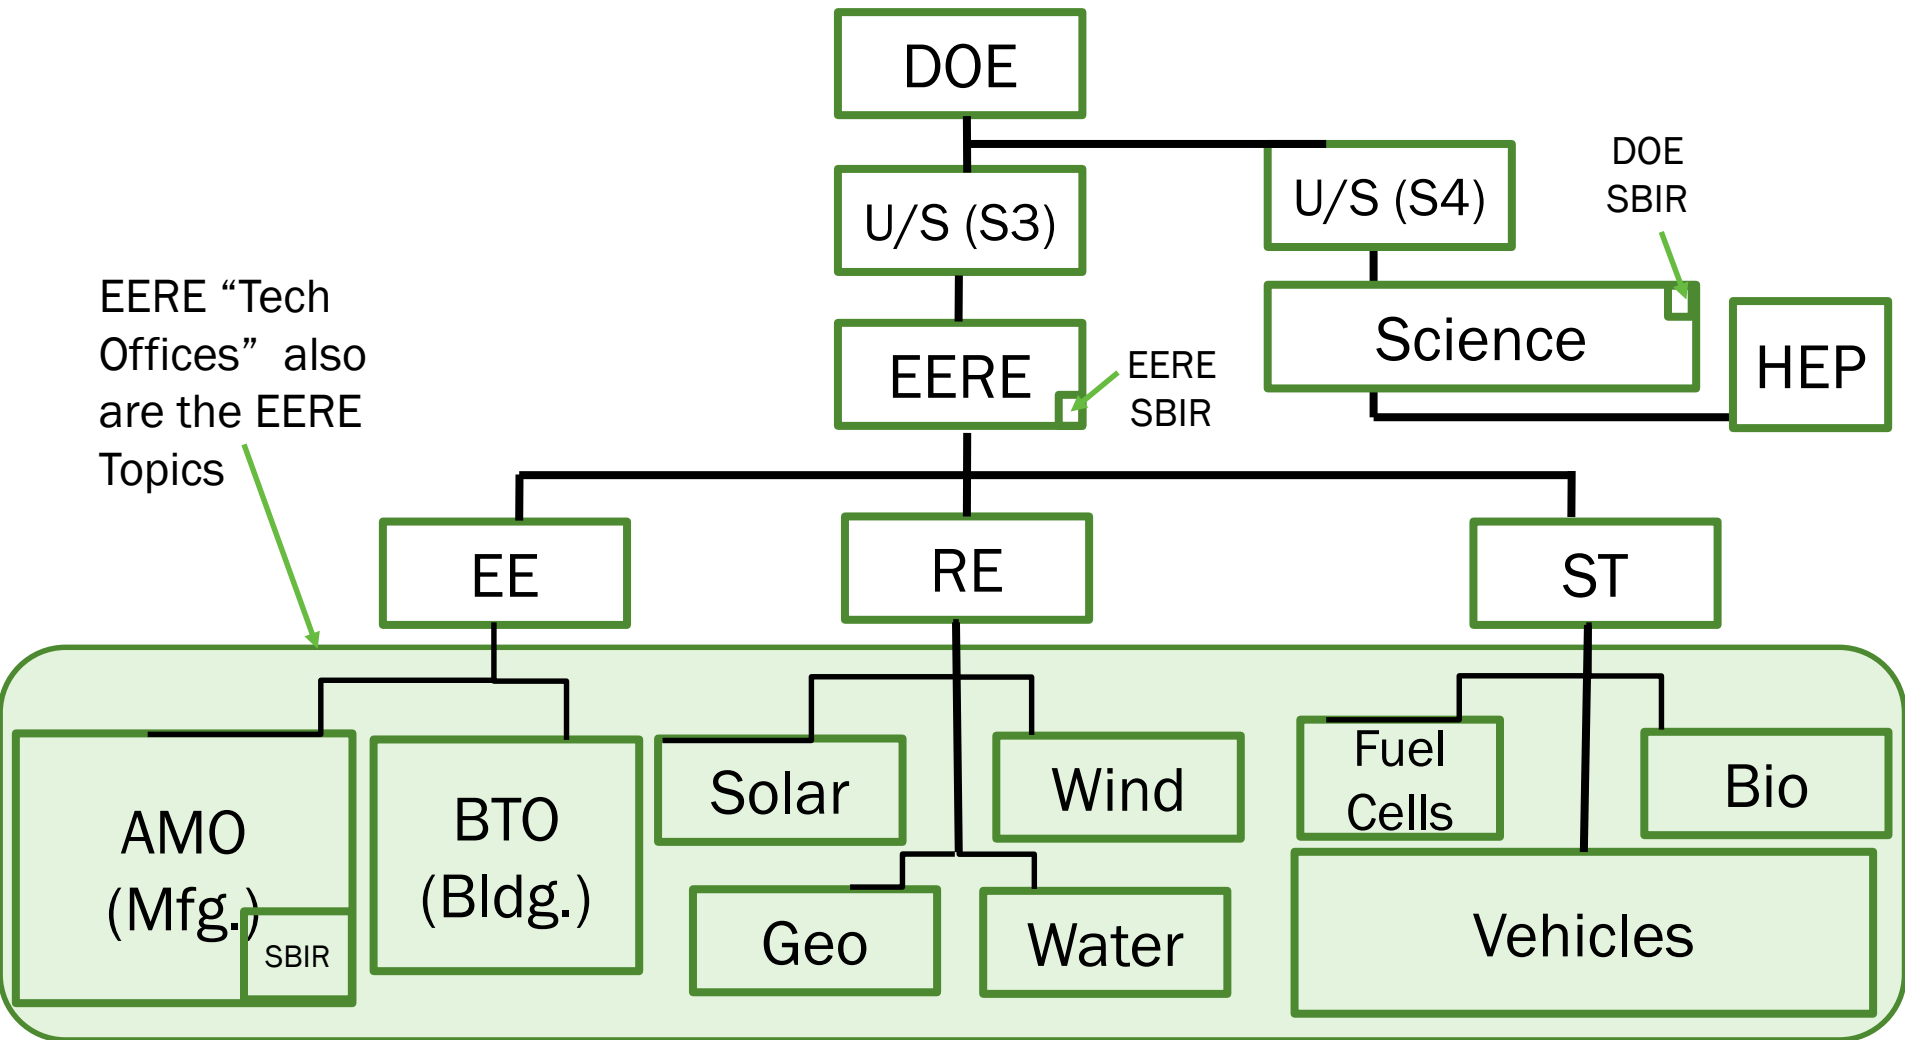

October 29, 2019  
DOE 2019 SBIR/STTR Phase I Release 2 PI Meeting

Tina M Kaarsberg, PhD  
SBIR Office Portfolio Manager  
Advanced Manufacturing Office  
[www.manufacturing.energy.gov](http://www.manufacturing.energy.gov)

# Summary of Talk

- **About Me, AMO**
  - Org Charts, Mission, Responsibilities etc.
- **About You**
  - Studies, Statistics
- **How to work together**
  - Advice for Applicants/Grantees
- **Questions?**

# DOE Org Chart (EERE, HEP excerpts)

# AMO Vision and Mission

**VISION:** U.S. global leadership in sustainable and efficient manufacturing for a growing and competitive economy.

**MISSION:** Catalyze research, development and adoption of energy-related advanced manufacturing technologies and practices to drive U.S. economic competitiveness and energy productivity.

# Project Manager\* Responsibilities (DOE-SBIR)

\* aka Technical Topic Manager (TTM)

- **Develop topic or subtopic**
- **Contact for internal/external questions on topics or subtopic**
- **Present at DOE-SBIR topics webinar**
- **Participate in One-on-one meetings at the PI meeting**
- **Recruit and assign reviewers (redact reviews) in PAMS**
- **Review LOIs, applications, score and rank award selections in PAMS**
- **Review interim and final reports**
- **Track projects closely enough to be able to make recommendations about likely Phase II awards**
- **Role limited to technical management**

# Current SBIR/STTR Funding

- Federal: ~ \$3,000,000,000
- DOE: ~ \$300,000,000 (10% of Federal)
- EERE: ~ \$60,000,000 (20% of DOE)
- AMO: ~ \$11,000,000 (18% of EERE)

In FY19 funded:

- 14 Phase I proposals
- 8 Phase II proposals

# Summary of Talk

- **About Me**
  - Org Charts, Mission, Responsibilities etc.
- **About You**
  - Studies, Statistics
- **How to work together**
  - Advice for Applicants/Grantees
- **Questions?**

# Federal SBIR/STTR Impact- (1983 to 2018)

- **Awards**

- ~115,000 Phase I and ~46,000 Phase II awards
- ~\$47 B award funding
- ~26,000 small business awardees

- **Patents**

- 132,216 U.S. Patents
- 10-12 Patents per day issued to SBIR-involved firms

- **Business Investment**

- **One in very six Venture Capital dollars in the U.S. goes to an SBIR-involved firm**

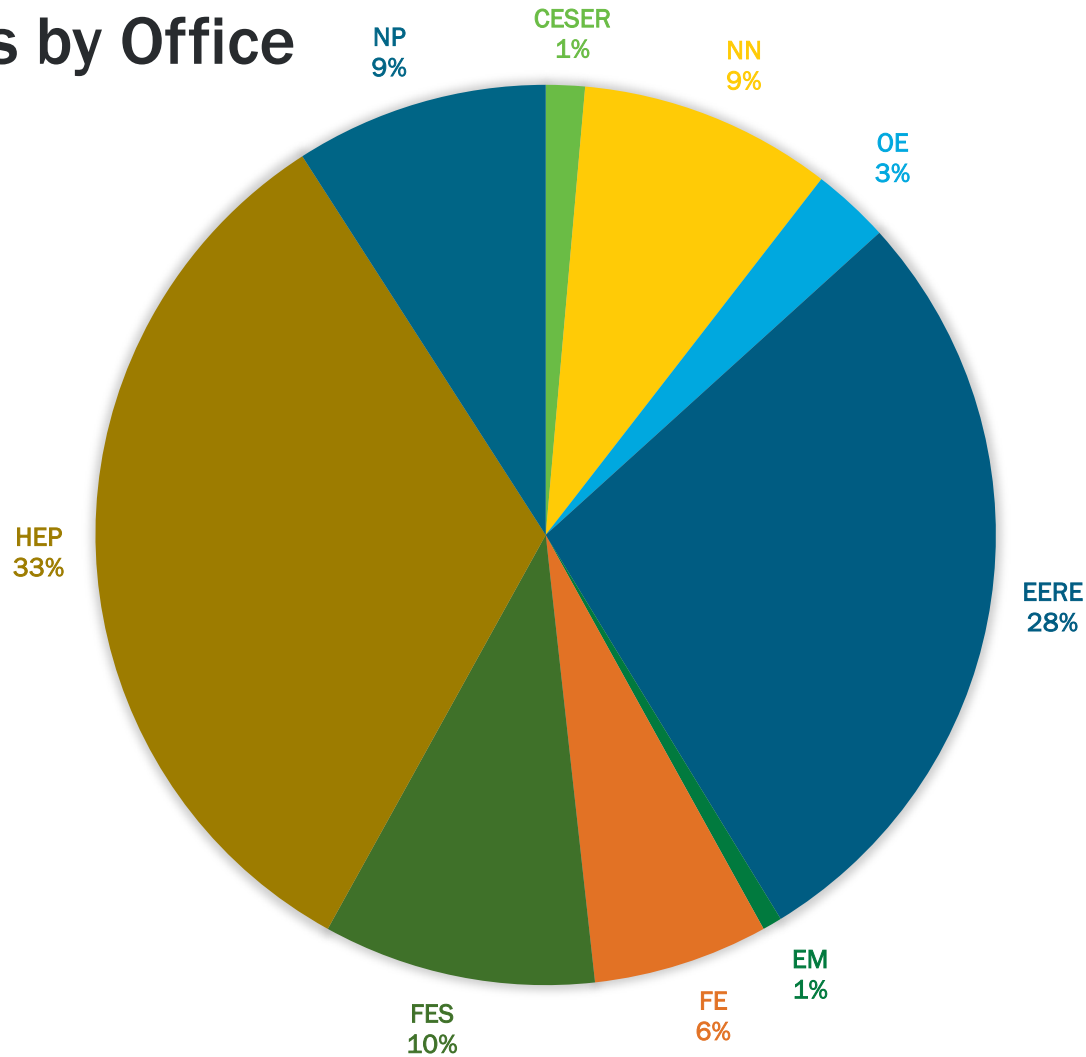

# FY 2019 Release 2 Topics/Subtopics

<b>Release 2:</b>	<b>34 topics, 143 subtopics</b>
Cybersecurity, Energy Security, and Emergency Response:	(1 topic, 2 subtopics)
Defense Nuclear Nonproliferation:	(3 topics, 13 subtopics)
Electricity:	(2 topics, 4 subtopics)
<b>Energy Efficiency and Renewable Energy:</b>	<b>(12 topics, 40 subtopics)</b>
<u>Regular: (ADVANCED MANUFACTURING Topic)</u>	<b>(1 topic, 3 joint topics, 8 subtopics)</b>
– 07a Manufacturing Cybersecurity	
– 07b Atomic Precision for Gaseous Separations	
– 07c Covetic Processing of Critical Materials and Strategic Materials	
Technology Transfer Opportunity (AM topic)	
– 07d TTO: Electrochemical Recycling Electronic Constituents of Value (E-RECOV)	
Joint Office (separate Topic – includes subtopics):	
– 17b AMO-GTO Desalination and Critical Material Recovery Systems from Other Energy Sources	
Environmental Management:	(1 topic, 1 subtopic)
Fossil Energy:	(3 topics, 9 subtopics)
Fusion Energy Sciences :	(3 topics, 14 subtopics)
High Energy Physics :	(7 topics, 47 subtopics)
Nuclear Energy :	(2 topics, 13 subtopics)

# FY 2019 Release 2, 9 Offices

## # Subtopics by Office

# Phase I Award itself is Huge

- You're already winners with double the chance of getting VC finding!
- After just a Phase I award small firms have a 20% chance of receiving such funding (vs. 10% chance without it)

<sup>1</sup><https://www.energy.gov/sites/prod/files/2019/03/f60/sbir-eere-fe-analysis-howell-report-2019.pdf>

# Your Future...on average

---

- Up to one third don't apply for a Phase II
- One third to half of Phase II applicants receive 1<sup>st</sup> Phase II.
- Smaller (10 > 20%) go on to 2<sup>nd</sup> Phase II.
- No third Phase II yet at DOE.
- Most EE and FE awardees do not apply again.

# Summary of Talk

- **About Me**
  - Org Charts, Mission, Responsibilities etc.
- **About You**
  - Studies, Statistics
- **How to work together**
  - Advice for Applicants/Grantees
- **Questions?**

# Components of Actual EERE Topic

"Topics" for EERE SBIR are derived from the Office name. Joint or Multiple Office Topics are separate and include all Office names in the Topic name

EERE SBIR subtopics are what other programs might consider to be topics.

EERE SBIR areas of interest (optional) are what other programs might consider to be subtopics.

EERE SBIR Technical Topic Managers are usually subtopic managers with multiple TTMs per Topic in all but the smallest subtopics

## 8. ADVANCED MANUFACTURING

Now \$1.1M std 1.6M high

Maximum Phase I Award Amount: \$150,000	Maximum Phase II Award Amount: \$1,000,000
Accepting SBIR Phase I Applications: YES	Accepting STTR Phase I Applications: YES

Now \$200K

The Advanced Manufacturing Office (AMO) ([www1.eere.energy.gov/manufacturing/](http://www1.eere.energy.gov/manufacturing/)) collaborates with industry, small business, universities, and other stakeholders to identify and invest in emerging technologies with the potential to create high-quality domestic manufacturing jobs and enhance the global competitiveness of the United States.

Applications may be submitted to any one of the subtopics listed below but all applications must:

- Propose a tightly structured program which includes technical milestones that demonstrate clear progress, are aggressive but achievable, and are quantitative;

### a. Surface Compatibility of Cellulosic Nanomaterial in Hydrophobic Matrix Materials ...

### b. Intelligent Systems for Materials Discovery

Combinatorial methods of materials screening provide rapid analyses of large numbers of... the following areas:

- Heterogeneous catalyst discovery: Systems for combinatorial discoveries ...
- Polymer discovery: Large numbers of polymer samples ...

Questions – Contact: Brian Valentine, [Brian.Valentine@ee.doe.gov](mailto:Brian.Valentine@ee.doe.gov) ...

... Questions – contact David Forrest, [David.Forrest@ee.doe.gov](mailto:David.Forrest@ee.doe.gov)

### ... REFERENCES: Subtopic a:

- TAPPI, Proposed New TAPPI Standard: Standard Terms and Their Definition for Cellulose Nanomaterial, Draft, WI 3021. (<http://www.tappi.org/content/hidden/draft3.pdf>)

Each Office Administrative Decisions on standard vs. high funding here

Blurb on Office with URLs goes here

Language to enhance EERE TTMs ability to select/manage projects goes here

General Topic and subtopic references are not absolutely required but are a EERE best practice. DOE-SBIR requires that references be publicly available (e.g. URL)

# Closeup of Latest AMO Topic

Applications may be submitted to any one of the subtopics listed below but all applications must:

- Propose a tightly structured program which includes **manufacturing-relevant technical milestones** that demonstrate clear progress, are aggressive but achievable, and are quantitative;
- Provide evidence that the proposer has relevant manufacturing R&D experience and capability.
- Provide evidence that the proposed technology can be scaled to appropriate manufacturing scale (e.g. widely available, cost-effective inputs, processes providing increased control, speed and throughput)
- Include projections for price and/or performance improvements that are tied to a recent baseline (i.e. Manufacturing Energy Bandwidth Studies and Advanced Manufacturing Technology Assessments (2015) [1] and/or state-of-the-art products or practices);
- Explicitly and thoroughly differentiate the proposed innovation with respect to existing commercially available products or solutions;
- Include a preliminary cost analysis; and
- Justify all performance claims with physics-based theoretical predictions and/or relevant experimental data.

# Much depends on Office Strategic Decisions

- **Reinforcing versus Gap Filling?**

- Reinforcing—pro: Easiest to get management approval, Higher likelihood of integration of awardees into overall program.
- Gap Filling –pro: Diversifies and derisks office portfolio—can be use to anticipate future priorities, greater potential for breakthrough technologies.

- **Hot vs Obscure Topic**

- Hot topic – pro: lots of high quality applications; con: other R&D performers huge compared to small business
- Obscure topic – pro: can be disruptive, potential very large energy savings; con: innovation ecosystem may be too small

# AMO Examples of Phase I -> II

## SBIR complements AMO portfolio: (reinforcing)

- FY 2018-2019 High performance conductors/Covetics subtopic builds on earlier AOP work at NETL, Argonne, and UMD:  
<https://www.energy.gov/sites/prod/files/2019/10/f67/Fabrication%20of%20Nanocarbon%20Metal%20Composites.pdf>

## SBIR expands AMO portfolio: (gap filling)

- FY 2013+ material (flash bainite) processing
- FY 2015-2016 high selectivity membranes
- FY 2017-2019 Atomically Precise manufacturing

<-First Phase III

**BLOG:** <https://www.energy.gov/eere/articles/metals-molecules-small-business-innovation-boosts-technology>

# Grantee Advice I

- **Frequency /Nature of contact with TTM?**
  - Yes, reach out –especially with news about your project/good or bad.
  - Ensure your questions not answered in Topic or FOA.
  - Assume first contact will be for scheduling.
  - Ask TTM about future contacts.
- **Expected Phase I progress:**
  - Meet stated goals or explain (e.g. concept not proven)
  - “Failure Example” concept doesn’t work and you don’t find an alternative within topic.
  - If doing R&D, you should never fail to learn

# Grantee Advice II

Goals of SBIR/STTR statutes include integrating small businesses into the federal R&D enterprise and commercializing more technologies, so it's ok to

- Request TTM enable technical contacts on related DOE projects (at the Labs etc.).
- Expect assistance with commercialization (Mainly from Program not TTM).

**NOT ok to**

- Request assistance with PII application strategy.

# Phase II Applicant Advice

- **Carefully read Phase II FOA**
  - Initial Phase II, IIA, IIB and IIC have different requirements and eligibility
- **RE READ the Topic**
  - Especially about what is expected in Phase II.
- **RE READ your Phase I application**
  - Did you meet stated goals? Ok if not –especially if met other goals, but explain. Make it easy for PM, reviewers to track progress.
- **Set Aside more time —MORE is expected (e.g. commercialization plan)**
- **Get Help**
  - State, Phase 0 (First time applicants only) assistance.

# Summary of Talk

---

- **About Me, my organization**
  - Org Charts, Mission, Responsibilities etc.
- **About You**
  - Topics, Studies, Statistics
- **How to work together**
  - Advice for Applicants/Grantees
- **Questions?**

---

**END—EXTRA AFTER THIS**

---

**The END—EXTRA  
AFTER THIS**

# DOE-wide Management of SBIR/STTR

24

# Office\* Portfolio Manager (O-PM) Responsibilities

\*EERE only

- Responsible for leading the effort on and gaining Office Director's approval of topics, budgets, and award selections
- Primary points of contact between their Offices and the EERE-Portfolio Manager (EERE-PM) convey information assembled from TTMs to EERE-PM
- Ensure alignment of Office goals and topics, and are responsible for ranking Office award selections
- Recruit TTMs
- Always copied on communications from EERE-PM to TTMs
- Responsible for determining the level of awareness needed at the office level for interactions with sector DAS or EE-1 and TTMs on topic reviews
- Best practice is for O-PM to have TTM experience; often also serves as a TTM

# Why Small Business Loves EERE SBIR:

## Reason #1

Undiluted Capital

## Reason #2

Validation, Guidance,  
and Follow-On Funding

## Reason #3

Flexibility and Security

## Reason #4

Commercialization  
Support

## Reason #5

Cleantech Innovation  
Connections

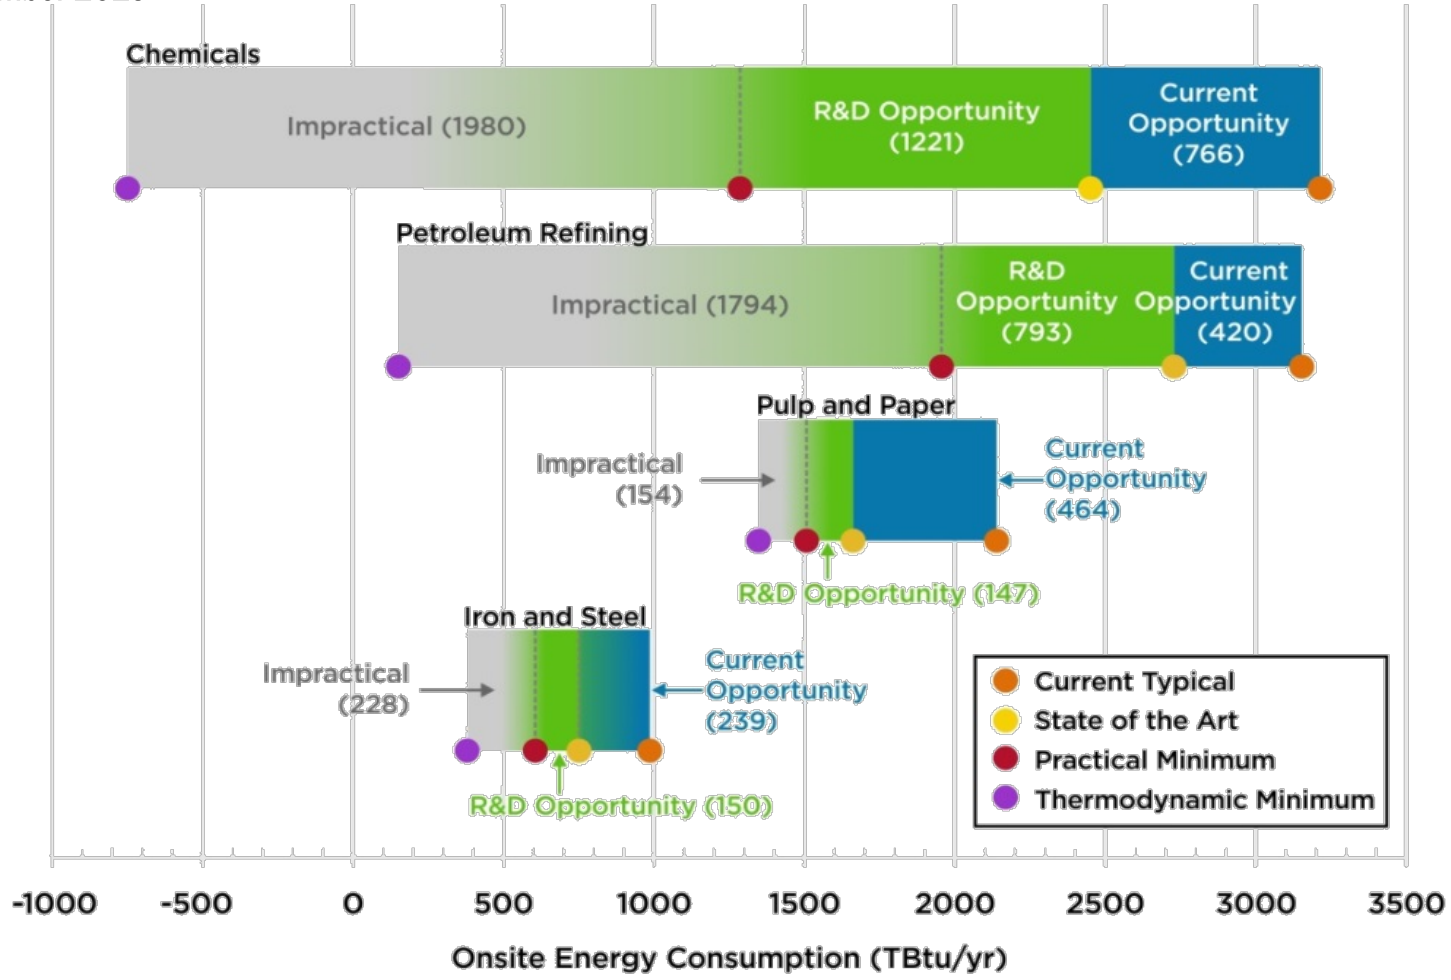

# What Makes a Good Subtopic

- Is R&D (no studies, although can address non-technology barriers with technology)
- Aligned with DOE/EERE/AMO
- Brings more small businesses into AMO research network
- Small businesses (different types) can contribute significantly (different ways: initial idea or development)
- Innovativeness
  - Dramatic energy /cost improvement possible
  - Innovation ecosystem exists (reviewers, DOE user facilities can contribute)
- Commercialization potential (market, potential applications, market need addressed)
- Goldilocks point—just right in broad/narrow spectrum (10-15% award rate)
- Too broad: logistically difficult, discourages small business
- Too narrow: too few high quality proposals, ecosystem too small (unconflicted reviewers hard to find)
- Topic developer has bandwidth to fully manage topic/project's 3-year lifecycle.

# Manufacturing Bandwidth Studies

AMO: September 2015

Current opportunities represent energy savings that could be achieved by deploying the most energy-efficient commercial technologies available worldwide. R&D opportunities represent potential savings that could be attained through successful deployment of applied R&D technologies under development worldwide. More info can be found at : <https://www.energy.gov/eere/amo/energy-analysis-data-and-reports>

# Recently Closed Multi-Topic Funding Opportunity

**FOA Released: May 7th, 2019**

**Federal Funding: \$89M**

**Cost share: 20%**

**Concept Papers Due: 6/20**

**Full Applications Due: 8/29**

**Led by the Advanced Manufacturing Office (AMO)**

Supports in innovative, early-stage advanced manufacturing applied R&D projects that focus on specific high-impact manufacturing technology, materials, and process challenges. The topics are aimed at foundational energy-related advanced manufacturing technologies that impact areas relevant to manufacturing processes and broadly applicable platform technologies

- **Topic 1. Advanced Materials**
  - Advanced Energy Conversion and Storage Materials
  - Innovative Manufacturing Processes for Battery Energy Storage
  - Materials and Manufacturing for Nanocrystalline Metal Alloys
  - Harsh Service Conditions
- **Topic 2. Low Thermal Budget Processes**
  - Advanced Drying Technologies
  - Thermal Process Intensification
- **Topic 3. Connected & Flexible Manufacturing and Energy Systems**
  - Medium-Voltage Power Conditioning Systems to Enable Grid-Dispatchable and Resilient Manufacturing Facilities
  - High Efficiency Combined Heat and Power
  - Validation of CHP and District Energy Systems
