

FEMA

Federal Emergency Management Agency (FEMA)

Mission: Enhance and maintain Information Technology infrastructure; develop and enhance key systems to support operating programs; and increase efficiencies and cooperation across FEMA's divisional and regional lines.

Cyber Snapshot: The mission of the Cyber Security Division (CSD) is to provide cyber security management services to FEMA's emergency management and continuity mission by utilizing the Federal Cyber Security Framework, in order to:

- Identify risks to systems, assets, data and capabilities
- Protect mission essential and critical services
- Detect cyber security events
- Respond to detected cyber security events
- Recover capabilities or services that were impaired due to cyber security events

FEMA is especially interested in student applicants who have completed coursework or previous work assignments related to: threat analysis, risk assessment, incident response, security architecture and engineering, network monitoring/network defense, cybersecurity research and technical writing, basic knowledge and understanding of industry best practices regarding policies, governance, strategies and standards in cybersecurity; and testing and development.
