Failure Forewarning in Complex Systems

The submitted manuscript has been authored by a contractor of the U.S. Government under contract DE-AC05-00OR22725. Accordingly, the U.S. Government retains a nonexclusive, royalty-free license to publish or reproduce the published form of this contribution, or allow others to do so, for U.S. Government purposes.

Agenda

Failure Forewarning in Complex Systems

- **Purpose – Problem Statement**
- **Failure Prediction in Real Systems**
- **Examples/Listing of 21 Case Studies**
- **Plan for Beneficial Using ORNL Intellectual Property**

Failure Forewarning in Complex Systems

The submitted manuscript has been authored by a contractor of the U.S. Government under contract DE-AC05-00OR22725. Accordingly, the U.S. Government retains a nonexclusive, royalty-free license to publish or reproduce the published form of this contribution, or allow others to do so, for U.S. Government purposes.

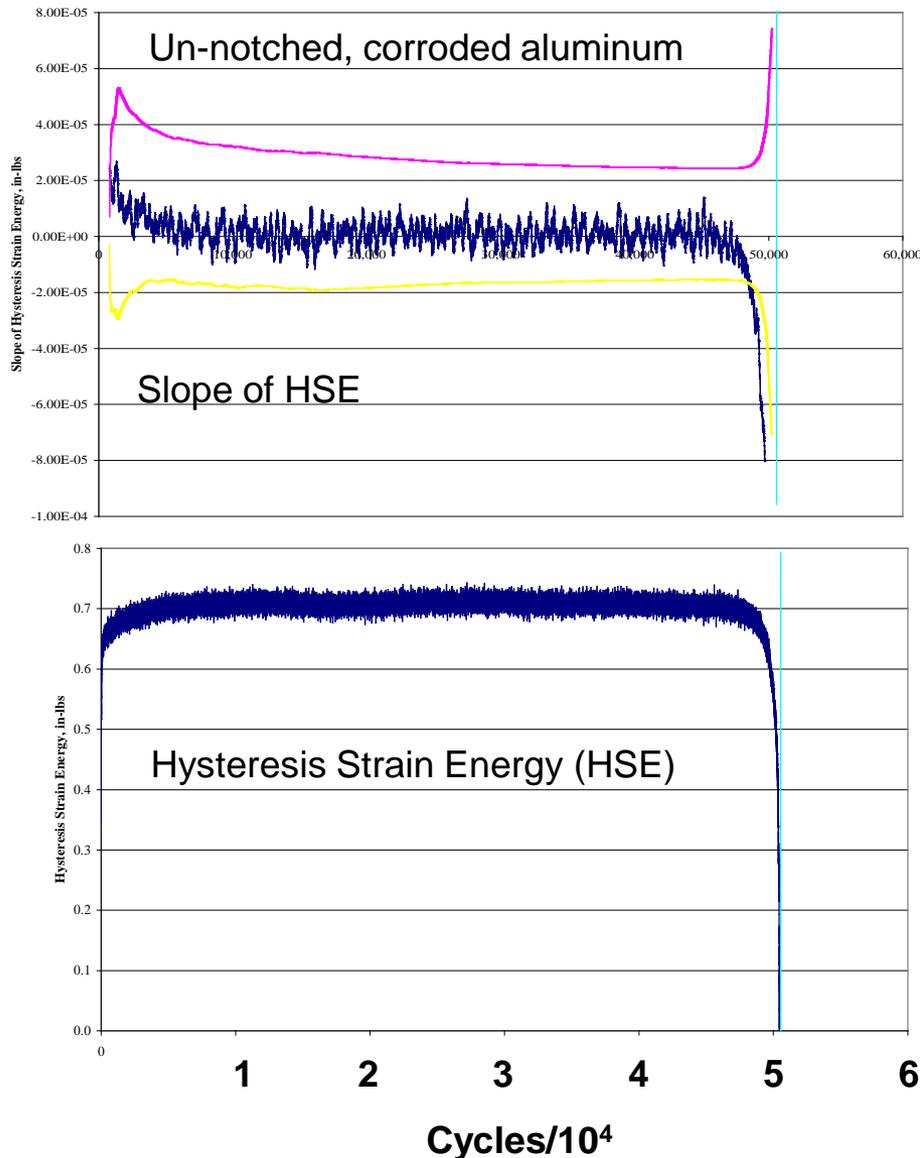

Purpose – Problem Statement

- **As the critical infrastructures of the United States have become more and more dependent on public and private networks, the potential for widespread national impact resulting from disruption or failure of these networks has also increased.**
 - **Securing the nation’s critical infrastructures requires protecting not only their physical systems**
 - **but, just as important, the cyber portions of the systems on which they rely.**
- **A failure is inclusive of random events, design flaws, and instabilities caused by cyber (and/or physical) attack.**
 - **One such domain, aging bridges, is used to explain the Complex Structure Failure Forewarning System.**
 - **We discuss the workings of such a system in the context of the necessary sensors, command and control and data collection as well as the cyber security efforts that would support this system.**
 - **Their application and the implications of this computing architecture are also discussed, with respect to our nation’s aging infrastructure.**

Failure Forewarning in Complex Systems

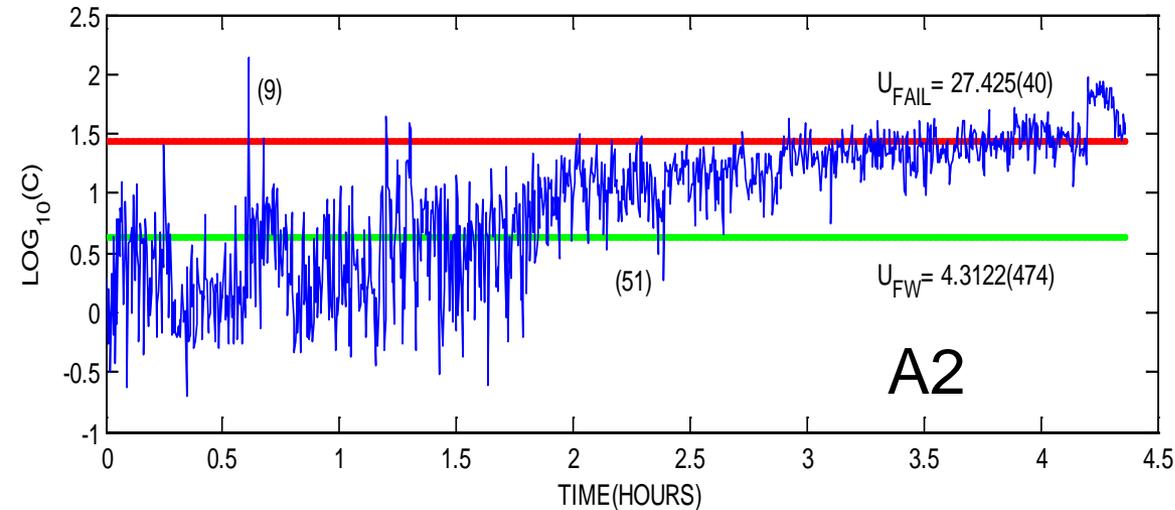

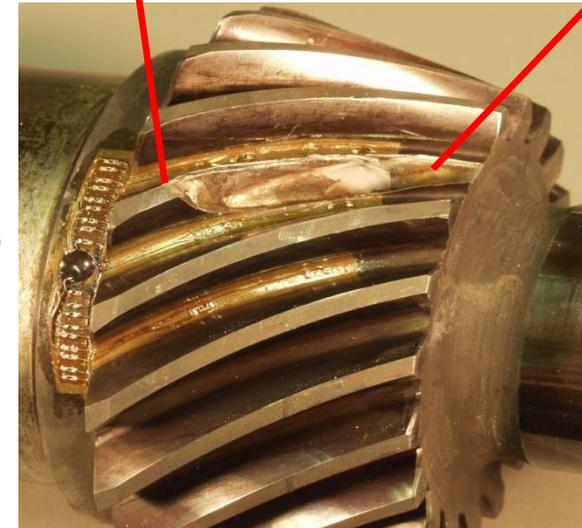

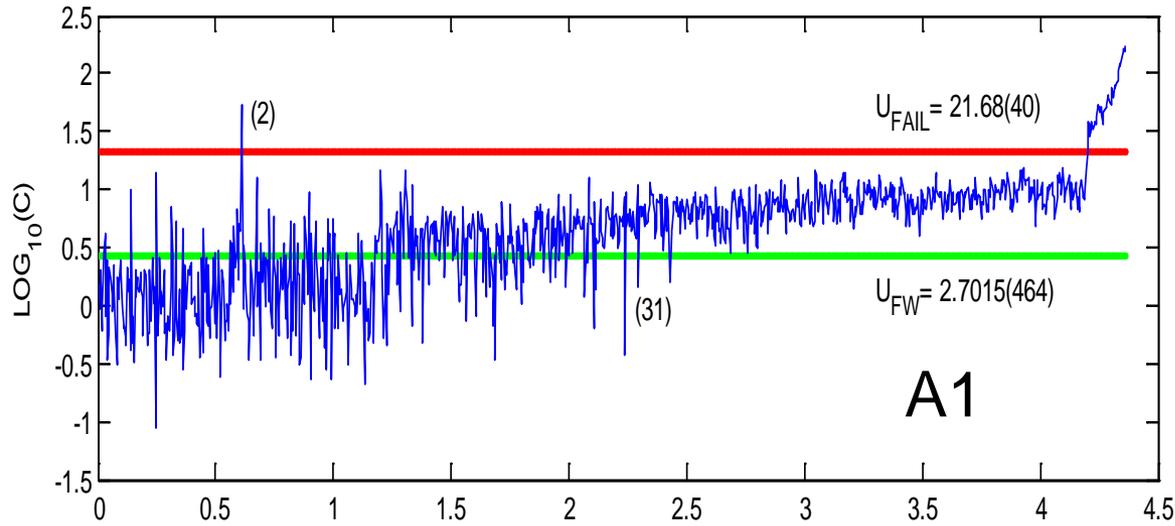

The submitted manuscript has been authored by a contractor of the U.S. Government under contract DE-AC05-00OR22725. Structural Failure

- Measure load, P , and deflection, δ
- $dU/dN = \int P d\delta$ over load cycle
 $= (dU/da) \times (da/dN)$
 N = cycle number
 a = crack length
 $dU/da \geq G_c$ (material property)
- Demonstration for ...
 - composites, aluminum, steel
 - (un)corroded materials
 - single/multiple site damage
 - widespread fatigue damage
 - periodic overloads
 - Crack Modes I, II, III
- Change in crack growth for forewarning: slope of hysteresis strain energy HSE beyond $\pm 4\sigma$

Helicopter (OH58C) Spiral Pinion

1.5 x (max torque)
4.4h to failure
Tri-axial acceleration
150 kHz x 1.5 sec

Failure Forewarning in Complex Systems

The submitted manuscript has been authored by a contractor of the U.S. Government under contract DE-AC05-00OR22725. Machine Applications: Forewarning Tests

<u>Data Provider</u>	<u>Equipment and Type of Failure</u>	<u>Diagnostic Data</u>
1) EPRI (S)	800-HP electric motor: air-gap offset	motor power
2) EPRI (S)	800-HP electric motor: broken rotor	motor power
3) EPRI (S)	500-HP electric motor: turn-to-turn short	motor power
4) Otero (S)	1/4-HP electric motor: imbalance	acceleration
5) PSU/ARL (A)	30-HP motor: overloaded gearbox	load torque
6) PSU/ARL (A)	30-HP motor: overloaded gearbox	vibration power
7) PSU/ARL (A)	30-HP motor: overloaded gearbox	vibration power
8) PSU/ARL (S)	crack in rotating blade	motor power
9) PSU/ARL (A)	motor-driven bearing	vibration power
10) EPRI (S)	800-HP electric motor: air-gap offset	vibration power
11) EPRI (S)	800-HP electric motor: broken rotor	vibration power
12) EPRI (S)	500-HP electric motor: turn-to-turn short	vibration power
13) PSU/ARL (A)	30-HP motor: overloaded gearbox	vibration power
14) PSU/ARL (A)	30-HP motor: overloaded gearbox	vibration power
15) PSU/ARL (A)	30-HP motor: overloaded gearbox	vibration power
16) PSU/ARL (A)	30-HP motor: overloaded gearbox	vibration power
17) PSU/ARL (S)	crack in rotating blade	vibration power
18) ORNL (A)	failure of laboratory structural samples	stress & strain
19) ORNL	machine tool chatter	acceleration
20) ARL (AS)	gear for overhead rotor of helicopter	acceleration
21) Y12	bellows coupling in machining center	motor current

Failure Forewarning in Complex Systems

The submitted manuscript has been authored by a contractor of the U.S. Government under contract DE-AC05-00OR22725. Accordingly, the U.S. Government retains a nonexclusive, royalty-free license to publish or reproduce the published form of this contribution, or allow others to do so, for U.S. Government purposes.

Aging Bridge System in context of Failure Forewarning in Complex Systems

- **Beneficial Use will Require Phased Tests of Failure Forewarning Techniques:**
 - necessary sensors, command and control and data collection, as well as the cyber security efforts to support this system.
- **Progressing from:**
 - scale models to
 - simple slab structural spans to
 - full size tests of failing structure ready for destruction.
- **Use Same Logic for Other Complex Structures**

A photograph of the Oak Ridge National Laboratory building at night. The building is a large, multi-story structure with a prominent glass facade on the right side. The building is illuminated from within, and the sky is a deep blue. In the foreground, there is a set of stairs leading up to the building, and a tall flagpole with an American flag. The logo for Oak Ridge National Laboratory is visible on the right side of the building.

Broken Coupling

Real Failure: CMI Magnum

- B9707 at Y12
- Machining center
- Coupling failed: W-axis
- Motor current
- Baseline: 17 Mar 1997
- Forewarn: 07 July 1997
- Failure: 17 July 1997
- Repair: 04 Aug 1997
- * 10-day forewarning
